# Battery tender solar charger manual pdf file pdf online

Battery tender solar charger manual.

Solar Ebike Battery Charger You're also just a few parts away from solar charging an electric bike. One way to find them is by going to the website of your motorcycle's manufacturer and searching within the website. Step 2: Connect the 5W Solar Panel to the Solar Charge Controller My 5W solar panel came with wires that had stripped ends. OEM service manuals give in-depth information about how to repair all of a motorcycle's systems. Whether you're searching for free manuals for motorcycles online or you're willing to pay to get the information you need, there are a few ways to find them. It's a 12V plug adapter that comes with an inline fuse and ring terminals — the right kind for my 12V battery. The panel will continue to charge the battery as I go about my day. For more help on finding the right size solar panel for your solar charging setup, check out my post on what size solar panel will charge a 12V battery quickly. You can use your own wire and connectors, or you can buy some to make the process a little easier. When all the wires were connected, my charge controller turned on to indicate that it was properly connected to the 12V battery. And the solar panel is now charging that battery. (However, for this project, because my solar panel is so small, I left out the fuse between the solar panel and charge controller.)For most charge controllers, you connect the battery first and then the solar panel. Time to take it outside. © 1996-2014, Amazon.com, Inc. MPPT charge controllers are much more efficient, but they're also much more expensive. And I can connect them to the charge controller terminals using a screwdriver. These are written for beginner and mid-skilled home motorcycle repair work. If the library has the book you need, you may have to request a printout of the pages, or take a photo of the information so you have it after you leave the library. I ended up buying something called the NOCO GC018. To find motorcycle manuals on auction websites, enter your bike's year and model information in the search bar, along with the word "manual" to bring up information about any manuals currently available on the auction website. Anything less, such as a 6V or 9V solar panel, won't work. Not bad! To test mine, I took everything outside (making sure no wires got disconnected in the process) and put the solar panel in direct sunlight. Then I just pulled the wires apart a little bit and stripped the ends. I can now just leave my charging setup outside in direct sunlight. You connected a solar panel to a battery via a charge controller. Step 3: Test Your 5W Solar 12V Battery Charger You've effectively just built a 5W solar 12V battery charger. If it is a lower voltage 5W panel (like 6V or 9V) it won't work with a 12V charge controller. Make sure your charge controller is compatible with your battery's chemistry. They provide useful tips and shortcuts that save you time and extra work. And I decided to write this article to set the record straight. However, because my solar panel was inside, at this point it wasn't getting enough sunlight to actually charge the battery. MORE FROM QUESTIONSANSWERED.NET According to our solar panel charge time calculator, it takes around 155 hours of direct sunlight for a 5W solar panel to fully charge a 50Ah 12V battery. Now your solar panel is connected... ..and you're done! Here's how mine turned out: That's really all there is to it. Once again, the terminals have a solar panel icon on them and are marked for positive and negative which makes it easy. If it's a 50Ah battery, they can fully charge it in around 12 hours or less of direct sunlight. Using what you just learned, you can build even more solar chargers. You can find these manuals through bookstore websites, parts stores and the publishers' websites.Libraries and Online Auctions for Service and Owner's ManualsLibraries and online auctions are two other places you may be able to find an owner's manual or a service manual for your motorcycle. For example, some charge controllers only work with lead acid batteries. To browse for your manual on this type of website, choose the make of your motorcycle, then navigate through the results to find the model you own. Here's what I plugged in to the calculator: And here are the estimated charge times for 5 other common solar panel sizes: 10W solar panel: 78.4 hours20W solar panel: 40.2 hours50W solar panel: 17.3 hours80W solar panel: 11.5 hours100W solar panel: 9.6 hours Of course, these estimated charge times vary depending on battery capacity. Like so: Then I used a screwdriver (a precision screwdriver, in my case) to connect the stripped wire ends to the charge controller's battery terminals. Here's how I did it: Materials & Tools Materials Tools Wire cutterWire stripperScrewdriver Step 1: Connect the 12V Battery to the Solar Charge Controller Connecting a battery to a solar charge controller requires wires, wire connectors, and an inline fuse. You can sometimes find these manuals online at websites such as SOHC4. DIY Solar Car Battery Charger Car batteries are also 12V batteries. If your motorcycle is listed in the site's database, select it and follow the on-screen directions to download it.OEM Motorcycle Service ManualsAn original equipment manufacturer (OEM) service manual is the kind used at dealerships that have service centers. There are also two types of manuals to consider: motorcycle owner's manuals and motorcycle repair service manuals.Owner's Manuals From DealersSometimes when you buy cheap, used motorcycles, they're older and the owner's manual don't necessarily come with the bike. The charge controller has overcharge protection, meaning it will stop the charging once the battery is full. You can charge a 12V battery with many different solar panel sizes. 2 More DIY Solar Charging Projects You Can Build Now Like I said, you just built a solar 12V battery charger. You just need to make sure it's a 12V solar panel. Consult your charge controller's manual for instructions on how to program it for your battery type. In fact, I recently did it myself: Then, after doing it, I saw that Google isn't exactly giving the best answer to this question: Huh? 5W Solar 12V Battery Charger Wiring Diagram Here's the circuit diagram for using a 5W solar panel to charge a 12V battery: And here's what I call the "real-world wiring diagram", which shows what it looks like in real life: Notes about this wiring diagram: Safety best practices are to place a fuse between the charge controller and both battery and solar panel. What Size Solar Panel Do You Need to Charge a 12V Battery? Others work with lead acid and lithium batteries.I recommend a PWM charge controller for this project because they're cheap Tip: This circuit diagram would work for many other solar panel sizes (e.g. 10W, 20W, 50W, 80W, 100W) as long as it's a 12V solar panel and you use the appropriate wire gauge and fuse size for the current. (I'll be sticking the stripped ends in the charge controller's terminals.) Now my wires are ready. But note that OEM service manuals can be costly, according to How to Motorcycle Repair.Retail Service ManualsThere are a couple types of retail service manuals for motorcycles, including Clymer manuals and Haynes manuals. Here are some ideas for your next project: 1. So, using the same solar panel and charge controller, I was able to make a solar car battery charger. For example, a 20W solar panel can charge a 20Ah 12V battery in around 17 hours of direct sunlight. Don't be fooled by how complex it looks — you just need a bigger solar panel and a small inverter. Knowing this, the question then becomes: "How fast do I want to solar charge my 12V battery?" Based on the above charge times, we can draw some conclusions: 5W and 10W solar panels are good for slow, trickle charging 12V batteries. Mine defaults to sealed lead acid batteries, which is the battery type I was using. They're a good size solar panel for maintaining a 12V battery's charge, and will slowly charge it up over the course of weeks — maybe even months depending on the weather and size of the battery. If you can't find a downloadable owner's manual on the company website, search for a local dealer and contact them to request a manual. This made it simple to connect it to my charge controller. I can connect them to the battery terminals using the ring terminals. So, once again, for the people in the back: Yes, you can charge a 12V battery with a 5W solar panel. 80W and 100W solar panels are good for fast charging large 12V and car batteries. It indicated that my 5W solar panel was charging my 12V battery at a rate of 0.2 amps: There you go — proof that a 5W solar panel can charge a 12V battery. A 50W panel can do it in around 8 hours. I then cycled through the system specs on my charge controller until I got to the PV current display. Fortunately, you can search online for owner's manuals. 20W and 50W solar panels are good for fast charging small 12V batteries. 2. I simply connected the positive and negative solar wires to their respective terminals on my charge controller. To start, I cut the 12V plug off the NOCO GC018 with my wire cutter. So that's what I did: I first connected the positive and negative wires to their respective battery terminals. Consult your controller's manual for the manufacturer's recommended connection order. Make sure to get a 12V 5W solar panel, or its affiliates Yes, a 5W solar panel can charge a 12V battery. Tip: You can reduce these charge times further by upgrading from a PWM to an MPPT charge controller. My controller's terminals have a battery icon on them, as well as a plus and minus, to help me know where each wire goes. There will probably be a charge for a printed copy of the manual.Websites That Provide Owner's ManualsThere are some websites that specialize in sharing motorcycle owner's manuals, explains My Bike Manuals. How Long Does It Take to Charge a 12V Battery with a 5W Solar Panel? If you can't find the service manual you need online, you may have to contact a dealer to order one.
